

BEARING APPLICATION WORLD 2021

Press release

August 2021

Regional support: BAW can look forward to gold sponsors from Schweinfurt and the surrounding area

Experts from research and practice: SKF, T&S and the FHWS support this year's BAW with a gold sponsorship.

From October 26th - 28th, 2021, the Steinbeis Transfer Centre for Rolling Bearing Technology will be hosting for the first time the Bearing Application World (BAW) - a digital fair for rolling bearing technology. With its practical orientation „Application - Operation - Solution“, BAW primarily addresses companies in the international rolling bearing market, employees and researchers. The varied supporting programme consists of exciting technical lectures and booth seminars and is co-designed by the expertise of our sponsors. Each day of the fair is dedicated to a specific topic, so that the wide range of applications is covered as widely as possible.

Measuring and inspection technology, wind power & electrical engineering: BAW theme days

The BAW starts with the theme day „Measuring and Inspection Technology for Rolling Bearing Components“, which Robert Schmidt from T&S Gesellschaft für Längenprüftechnik mbH will support with a presentation on profile and roughness measurement of rolling bearings. T&S specialises in contour and roughness measurements and offers measuring technology and analysis software. There will also be a booth seminar during the lunch break. Professor Stephan Sommer from the University of Applied Sciences Würzburg-Schweinfurt (FHWS) will be giving a speech on the first theme day about new bearing systems in mechatronic drive trains. The FHWS is one of the largest universities of applied sciences in Bavaria, where the engineers of tomorrow are trained. Visitors can get information about the various training opportunities at the FHWS booth.

On the „Rolling Bearings in Wind Power“ theme day, SKF GmbH will supplement the programme with a booth seminar and expert presentations by Thomas Peuschel, among others, on experiences and examples in the context of white etching cracks (WECs). The SKF Group is one of the market leaders in the rolling bearing industry with its extensive range of products and services in the fields of application technology, maintenance and customised adaptations. Schweinfurt is the largest production site of the SKF Group in Germany. The last day of the BAW is dedicated to „Parasitic Currents and Lubricants“. The University of Applied Sciences Würzburg-Schweinfurt will provide its scientific expertise through cross-faculty lectures from electrical engineering by Professors Zink and Friedrich.

In addition to the gold sponsors, other companies offer silver and bronze sponsorships.
